NUTRITION

SCALE

The Michelle Bridges Nutrition Scale weighs your food and calculates the calories and totals of 6 common nutrients*.

Knowing the nutrients in your food allows you to control what you eat. You can adjust your food portions to suit your health requirements and lifestyle.

*NUTTAB 2010 – Australian Food Composition Tables: Food Standards Australia New Zealand, Canberra.

QUICK START INSTRUCTIONS

The following sequence is used to obtain the nutrition values of food:

- 1. If using a bowl to contain the food, place it on the scale first. (*Please refer to Page 3 for details on the tare function*).
- 2. Press 'ON' to activate the scale. It is ready for use when 'zeroed'.
- 3. Select the unit measure by pressing 'oz/g'. If measuring liquids, select either ml or fl oz.
- 4. Place the food on the scale (or in bowl): the weight will appear in the display window.
- Find the corresponding food code at the back of this booklet. Enter the 3 digit number. Note: The booklet lists 958 foods. If your food has not been specifically coded, please find the food that is closest in content and use its 3 digit number.
- 6. The scale will then instantly and simultaneously display the nutrient values of the food weighed.
- 7. Press 'M+' to save to memory. 'M01' will appear representing the first food measured and saved.
- 8. Remove the first food. Press 'CLR/MC' to clear the food code number. Place the next food on the scale.
- 9. Repeat steps 4 8 for additional foods ('M02', 'M03', 'M04' etc will appear sequentially with every additional food saved).
- 10. Press 'MR' (Memory Recall) to view stored cumulative values of the different foods weighed. Weight is not shown.
- 11. There are 2 methods to clear the saved data before commencing a new series of weighing and measuring.
 - i. Turn the scale off, then turn it on.

ii. With the scale in weighing mode (WT is displayed), the food values show '000' and the last 'M' number saved is displayed. Touch the 'CLR/MC' key. 'M' will flash. Touch the 'CLR/MC' key again. The 'M' number disappears confirming that all the data last saved has now been cleared. The scale is now ready for weighing and measuring again.

INSTALLING THE BATTERIES

Purchase 4 x AAA alkaline batteries. Then turn the scale over to open the battery compartment by lifting the tab. Insert the batteries and ensure the +/- terminals face the

correct direction by corresponding with the markings inside the compartment.

The scale displays 'Lo' when batteries need replacing. Always use new, fresh alkaline batteries.

BATTERY WARNING

- Non-rechargeable batteries are not to be recharged.
- Only batteries of the same or equivalent type are to be used.
- Batteries are to be inserted with the correct polarity.
- Remove exhausted batteries from the product.
- Remove batteries from the battery compartment when not in use.
- Never throw batteries in a fire or attempt to open up their outer casing.

BATTERY WARNING:

INTERNAL BURNS / CHOKING HAZARD

Swallowing batteries may lead to serious injury or death (severe burns can occur within 2 hours).

KEEP BATTERIES OUT OF REACH OF CHILDREN *Dispose of batteries immediately and responsibly*

OPERATING THE SCALE

We recommend you read the instructions carefully first before attempting to operate the scale. Please keep this booklet for future reference.

Simple weighing

- 1. If using a bowl to contain the food, put it on the scale first before turning on.
- 2. Press 'ON' to activate the scale.
- 3. The scale displays all the information segments as '0'. 'WT' will appear at the top left corner of the screen indicating that the scale is in weighing mode and ready for use.
- 4. Select the unit measure by pressing 'oz/g'.
- 5. Place the food slowly onto the scale.
- 6. The weight value will be shown.

To measure liquids

- 1. Place the container on the scale first before turning on. Then select either ml or fl oz by pressing 'oz/g'.
- 2. Pour the liquid into your container, checking the display at the same time. Stop when the required volume is reached.

Power on/off

If left idle for about 60 seconds the scale automatically turns itself off. Otherwise, press 'OFF'. This will help preserve battery life.

Tare function

Use 'ZERO' for this function.

The function allows the separate weighing of foods as each food is added to the scale. No need to empty the bowl if using one.

- 1. After weighing the first food, press 'ZERO'.
- 2. With the first food on the scale, add the second food. The readout will now show the weight of the second food only. Repeat these steps if you have additional foods to weigh. The total combined weight of the foods must not exceed the capacity of the scale, which is 10,000g / 361oz / 10,000ml / 360 fl oz.
- 3. The total weight of the items on the scale, (including the bowl if using one), can be obtained by pressing the 'ZERO' button again. Remove all items from the scale. The total weight will be displayed as a negative number.

If you use the Tare function, the weight of the bowl will be omitted thereby providing the nutrition values calculated based only on the weight of the food - not the food AND container. In simple terms, when you put an empty container on the scale and press the 'zero' key, it returns the weight registered on the scale to zero. When you place food in the container, only the food is weighed.

Many foods, such as whole apples, may be weighed directly on the scale, so there is no need to set a tare weight. Other foods that are liquid and items such as cottage cheese or apple sauce should be placed in a separate container before being set on the scale.

4

This easy-to-use scale instantly calculates the calorie, fibre and nutrient values of the food weighed.

How to obtain nutrition data

Note : The booklet lists 958 foods. If your food has not been specifically coded, please find the food that is closest in content. and use its 3 digit number.

- 1. Weigh the food first (Refer to Page 3).
- 2. Next search for the corresponding 3 digit food code from the list at the back of this booklet.
- Enter the food code using the numerical keypad. For example, the code for Sugar Banana is '026' (Banana, lady finger or sugar, peeled, raw).
- 4. The scale will instantly and simultaneously display the nutrition values of the food weighed. It will identify the Calorie, Salt, Protein, Fat, Carbohydrate, Cholesterol and Fibre content.
- 5. If a nutrient value exceeds the scale's display limit, '----' will appear on the screen. Simply reduce the portion of food weighed.

How to save nutrition data and obtain total values

* The scale allows up to 99 foods to be saved to memory.

- 1. Weigh your first food, then key its corresponding food code to obtain the nutrition values (*steps as above*).
- 2. Press 'M+' to save it.
- 3. The display will show 'M01' to indicate the first saved nutrition data.
- Before adding the next item, touch the 'CLR/MC' key to clear and 'zero' the display. Add the next item, weigh, enter its foodcode, then press 'M+' again.
- 5. The display will show 'M02' to indicate the second saved nutrition data.
- Repeat Steps 1 4 for the third item. The display will show 'M03' to indicate the third saved nutrition data.
- 7. To view the accumulated total values of all the foods entered in the one session, press the 'MR' key (memory recall). The scale will display the accumulated amounts of Calorie, Salt, Protein, Fat, Carbohydrate (with sugar alcohols), Cholesterol and Fibre content.
 The total weight of the feedback and the sector will be the feedback.

The total weight of the foods placed on the scale will not be shown.

This useful function accumulates and saves data and allows tracking of the total nutrients consumed.

How to recall saved nutrition data

- 1. When in weighing mode (WT is displayed), press the memory recall key or 'MR'.
- The scale displays the stored cumulative values of the different foods weighed. If 5 items were last saved, then the scale will show 'ΣM05' confirming that the values shown relate to those 5 food items. The total weight of the items placed on the scale will not be shown.
- 3. To return to weighing mode, press 'MR'.

How to clear saved nutrition data

There are 2 methods to clear the saved data before commencing a new series of weighing and measuring.

- i. Turn the scale off, then turn it on.
- ii. With the scale in weighing mode (WT is displayed), the food values show '000' and the last 'M' number saved is displayed. Touch the 'CLR/MC' key. 'M' will flash. Touch the 'CLR/MC' key again. The 'M' number disappears confirming that all the data last saved has now been cleared. The scale is now ready for weighing and measuring again.

Caring for your scale

- Handle the scale with care. Do not drop it.
- When necessary, wipe the glass platform with a slightly damp cloth.
- Avoid the use of corrosive cleaners.
- Do not immerse the scale in water.
- Do not attempt to dismantle the scale. It does not contain parts that may be repaired by the user.
- Do not subject the scale to extreme temperatures.

M michelle bridges

NUTRITION Food Codes

The following pages list 958 foods. If your food item has not been specifically coded, please find the item that is closest in content and use its 3 digit number. You must enter 3 digits. Failure to do this will result in an invalid entry. For example, the correct code for 'Almond, milk chocolate-coated' is 001, not '1'

A

001	Almond, milk chocolate-coated
002	Anchovy, canned in oil, drained
003	Apple, dried
004	Apple, green skin, unpeeled, raw
005	Apple, jonathon, unpeeled, raw
006	Apricot, canned in syrup
007	Apricot, dried
008	Apricot, raw
009	Artichoke heart, canned in brine, drained
010	Artichoke, globe, raw
011	Artichoke, jerusalem, peeled, raw
012	Asparagus, canned in brine, drained
013	Asparagus, raw
014	Avocado, raw

В

015	Bacon, breakfast rasher, fried
016	Bacon, breakfast rasher, grilled
017	Bacon, breakfast rasher, raw
018	Bacon, middle rasher, lean, grilled
019	Bacon, middle rasher, lean, raw
020	Bagel, from white flour
021	Baked beans, canned in tomato sauce
022	Baked beans, canned in tomato sauce, sal
	reduced
023	Baking soda (bicarbonate), dry powder
024	Bamboo shoot, canned in water, heated,
	drained
025	Banana, cavendish, peeled, raw
026	Banana, lady finger or sugar, peeled, raw
027	Bar, carob
028	Bar, honeycomb centre, chocolate-coated
029	Bar, muesli, plain or with dried fruit
030	Bar, muesli, plain or with dried fruit,
	chocolate-coated
031	Bar, muesli, plain or with dried fruit,
	yoghurt-coated
032	Bar, muesli, with added nuts
033	Bar, muesli, with chocolate chips
034	Barley, pearl, boiled, no added fat or salt

035	
036	Basil, green, raw
037	Bean, broad, fresh, boiled, drained
038	Bean, broad, fresh, raw
039	Bean, butter, fresh, boiled, drained
040	Bean, butter, fresh, raw
041	Bean, cannellini, canned, drained

Notes

Glossary - Nutritional Terms

Calorie

A calorie is a basic unit used to measure the energy contained in food. More specifically, it is the amount of energy needed to raise the temperature of 1 litre of water by 1 degree Celsius. When you eat food, you are consuming the energy that is stored within the protein, carbohydrate and fat molecules of that food.

1 Calorie = 1 kilocalorie = 1,000 calories = 4.184 kilojoules = 4,184 joules

Salt

Salt contains sodium, a naturally occurring mineral needed by the body to maintain life. Sodium occurs in many forms such as sodium chloride (table salt), sodium bicarbonate (baking soda) and monosodium glutamate (MSG). Sodium is especially important in the diet because of its effect in conserving water. Certain foods are naturally higher in sodium, such as celery, buttermilk, and some cheeses. Others, like canned or processed foods, have higher levels due to the salt added in processing. High intakes of dietary salt may contribute to high blood pressure or to your body retaining too much water.

Protein

Protein contains complex chains of amino acids necessary for conducting a variety of body functions, such as building tissues, making important body chemicals (e.g. enzymes and hormones) and maintaining growth and repair processes. While many plant-based foods contain some protein, including beans, peas, vegetables, nuts and seeds, these foods do not contain all the essential amino acids. Other protein sources from animals such as meat, fish, poultry, eggs, and dairy products (milk, cheese and yogurt) are considered higher in protein content since they contain all essential amino acids. Each gram of protein provides four calories of energy.

Fat

Fats occur naturally in foods and play an important role in nutrition. Fats, oils and some foods like nuts (e.g., peanuts, walnuts and almonds) are a concentrated source of energy for the body. Fats store energy in the body, protect tissues and transport fat-soluble vitamins in the blood. Fat is found in meats, fish, and meat substitutes, breads, starches and some dairy products. Fat supplies nine calories per gram, twice as many as protein or carbohydrate.

Carbohydrate

Carbohydrates are the body's primary source of readily available energy. The main forms of carbohydrate are sugars and starches. Sources of simple carbohydrates include table sugar, chocolate and refined flour products. Complex carbohydrates include starches like oats, high fibre cereals and whole wheat flour products. Together simple and complex sugars are broken down in the body into glucose. Glucose is the preferred type of energy used by vital organs and, especially, the brain. Each gram of carbohydrate provides four calories of energy.

Cholesterol

There are two different types of cholesterol: a blood (serum) form and a dietary (food) form. It is important to know that cholesterol is not only consumed in the diet, but also produced in the body. Dietary cholesterol is found in foods of animal origin such as egg yolks, organ meats and higher fat dairy products. Blood cholesterol occurs naturally and is necessary for the body to produce steroid hormones like estrogen and testosterone. Cholesterol maintains the outer structure of cells and is also required to produce substances called bile acids that aid in the break down fats. Excessive consumption of dietary cholesterol may increase the level of blood cholesterol. A high level of cholesterol in the blood has been shown in studies to be a major risk factor for heart disease. Plant-based foods such as fruits, vegetables, grains, legumes (beans, peas and lentils) do not contain cholesterol.

Fibre

Fibre is a form of carbohydrate that is not digestible in the body. While carbohydrates have a big impact on blood sugar, fibre does not. Fibre gives a feeling of fullness and causes a person to feel less hungry. Foods such as beans, fruits and vegetables (especially their skins) and whole grains are an excellent source of dietary fibre and also contain many nutrients. If you eat more fibre it is important to drink more water to avoid bloating. Fibre contributes about 1.5 to 2.5 calories per gram.

USE OF DATA

There are limitations associated with food composition databases. Nutrient data published in NUTTAB 2010 may represent an average of the nutrient content of a particular sample of foods and ingredients, determined at a particular time. The nutrient composition of foods and ingredients can vary substantially between batches and brands because of a number of factors, including changes in season, changes in formulation, processing practices and ingredient source. While most of the data contained in NUTTAB 2010 are generated from analysed values, some of the data are borrowed from overseas food composition tables; supplied by the food industry; taken from food labels; imputed from similar foods; or calculated using a recipe appproach.

For these reasons, the nutritional values displayed by the scale should be considered as a very useful guide to good nutrition, but not as an absolute measure. In most cases, the accuracy will be sufficient to support your dietary requirements. However, we cannot assume any liability related to the accuracy and completeness of the information provided, nor to the way in which the information is used by the consumer. Before beginning any diet management program, users should consult with their physician or a registered dietitian.

Disclaimer Notice

Food Standards Australia New Zealand (FSANZ) makes NUTTAB 2010 available for the benefit of the public and on the understanding that you will exercise your own skill, care and judgment with respect to its use and you will carefully evaluate the accuracy, currency, completeness and relevance of the material for your purposes.

NUTTAB 2010 is made available only for the purposes of providing nutrient data and ancillary material to users. FSANZ has taken great care to ensure the material provided in NUTTAB 2010 is as correct and accurate as possible. However, FSANZ makes no warranty that the material contained in NUTTAB 2010 will be free from error, or if used will ensure compliance with the relevant requirements of the Australia New Zealand Food Standards Code. FSANZ recommends that users viewing this publication for dietary purposes consult a health care practitioner for a comprehensive dietary assessment.

By using the material in NUTTAB 2010, you acknowledge that in no event shall FSANZ be liable for any incidental or consequential damages resulting from use of the data. FSANZ also advises you that any reference to a brand name product contained in NUTTAB 2010 is not to be taken as an authoritative statement of the composition of that product, due to changes in formulation that may have occurred since the FSANZ data were generated. It is also not to be taken as a statement that a particular product complies, or does not comply, with any labelling declarations that might have been made for it or with any regulatory requirements. If you require current data on a specific branded product, you should contact the manufacturer of that product.
